

(a) late basin, $(m, \varepsilon) = (2, 0.1)$ (b) last basin, $(m, \varepsilon) = (3, 0.1)$ 

(c) contact contribution vs time-step effect

(d) frozen-gate vs product law, $B \leq 20$  $a = 0.4$

(a,b) contact indicator

(c,d) $m = 2$ x local 10^6 -path run $a = 0.2$ -o- (a,b) mean contact $c_a(t)$ (c,d) $m = 3$ -•- largest Δt effect (exact/EM/Richardson) $a = 0.15$
